Clathrin coat assembly protein AP180 (Clathrin coat associated protein AP180) (91 kDa synaptosomal-associated protein).
Name-SNAP91; Synonyms-KIAA0656;
Homo sapiens (Human).
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;
Mammalia; Butheria; Primates; Catarrhini; Hominidae; Homo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROM N.A.

"Rat prostatic steroid binding protein: DNA sequence and transcript
                                                                               (C1:C3/C3:C2) prostatein molecules.
--- SUBCELLULAR LOCATION: Secreted.
--- TISSUE SPECIFICITY: Ventral prostate.
--- INDUCTION: Androgen dependent, as shown by the decrease in the level of the protein following castration.
--- MISCELLANEOUS: C3 is encoded by two different genes.
--- SIMILARITY: Belongs to the uteroglobin family. Lipophilin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Prostatic steroid-binding protein C3

-!- FUNCTION: Uteroglobin binds progesterone specifically and with high affainty. It may regulate progesterone concentrations reaching the blatocyst. It is also a potent inhibitor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- SUBUNIT: Homodimer, antiparallel disulfide-linked.
-!- INDUCTION: Uteroglobin, synthesized in the uterus and lung, is secreted by the uterus upon induction by progesterone.
-!- SIMILARITY: Belongs to the uteroglobin family.
                                                                                                                                                                             ŝ

The active enzyme consists of a catalytic VI domain attached to an integral membrane VO proton pore complex. This subunit is a non-integral membrane component of the membrane pore domain and is required for proper assembly of the VO sector. Might be involved in the regulated assembly of VI subunits onto the membrane sector or alternatively may prevent the passage of protons through VO pores. CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (V-ATPase d subunit)
kDa subunit) (V-ATPase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        to

-!- SUBUNIT: Homodimer; antiparallel disulfide-linked.
-!- INDUCTION: Uteroglobin, synthesized in the uterus and lung, is secreted by the uterus upon induction by progesterone.
-!- SIMILARITY: Belongs to the uteroglobin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Biopolymers 34:773-782(1994).
-1- FUNCTION: Uteroglobin binds progesterone specifically and with high affinity. It may regulate progesterone concentrations reaching the blatocyst. It is also a potent inhibitor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STRUCTURE BY NMR OF 39-68.

C;Comment: Uteroglobin is secreted by the uterus upon induction by progesterone. It bind
C;Genetics: 19/1; 81/3
A;Introns: 19/1; 81/3
C;Complex: homodiner linked by two disulfide bonds
C;Cuprefamily: uteroglobin
C;Keywords: homodimer; steroid binding; uterus
C;Keywords: homodimer; steroid binding; uterus
